

## 6.10 Recreational Unmanned Aircraft “Drones”

*The term "unmanned aircraft" means a device that is used or intended to be used for flight in the air without the possibility of direct intervention from within or on the device, and the associated operational elements and components that are required for the pilot or system operator in command to operate or control the device (such as cameras, sensors, communication links). This term includes all types of devices that meet this definition (e.g., model airplanes, quad-copters, drones) that are used for any purpose, including for recreation or commerce.*

*The Federal Aviation Administration provides regulation and guidance governing the use of Unmanned Aerial Systems, however as a motorized vehicle, an unmanned aircraft is governed by the OHV regulations while they are on or immediately over the ground. Other regulations, such as closures and restrictions (43 CFR 8364) may be required to more comprehensively manage this activity.*
